

Booster Pump Warranty Information

For the warranty on a Pulsar booster pump to be valid, a Pulsar Chlorinator Warranty Registration Card must be filled out and registered with Arch Chemicals. **Please note that a completed warranty registration card must include the pump serial number. It is important that the serial number be written on the card, as warranty claims will not be honored on pumps that have not been properly registered.**

To locate the serial number on the pump, remove the cover at the end of the pump motor. This is the cover that is removed to install electrical service to the pump. The serial number for the pump is printed on the label affixed to the J bracket securing the starter coil (see photo below). The top number is the model number of the pump motor. The bottom 4 or 5 digit number is the serial number required for warranty registration/claims.

To receive credit on a defective pump, the same procedure is followed as with other defective Pulsar parts. After you replace the defective pump with one from your stock, a warranty claim form must be completed and forwarded to:

Bacon Logistics

**2765 Michigan Avenue Road, N.E.
Cleveland, TN 37323
ATTN.: Mike Leonard, Arch Chemicals**

The defective pump should not be returned with the warranty claim form -- it should be kept until credit is received. Once credit is received on the pump, it may be discarded. In some instances, before a credit is issued it may be requested that the pump be returned for inspection. If this request is made and the pump is not returned, the warranty claim on that pump will be denied.
